Issue: The printer is failing to print documents from a laptop

Troubleshooting steps:

1) **Checked physical connections: Ensured the printer is powered on and the USB/network cable is securely connected**

2) **Verified printer status: Checked the printers LCD screen for error messages (E.g.,paper,jam,low ink.)**

3) **Cleared print queue: Opened the printer's setting on the laptop to cancel any stuck or pending pint jobs.**

4) **Restarted devices: Power-cycled both the printer and the laptop to clear temporary software glitches.**
5) **Checked drivers: Confirmed the correct printer driver is installed and updated via the computers device manager**

Resolution: The print queue was cleared and the printer was power-cycled, which restored communication between the devices and successfully cleared the pending document.
