

I opened Settings, went to System, and changed the display scaling

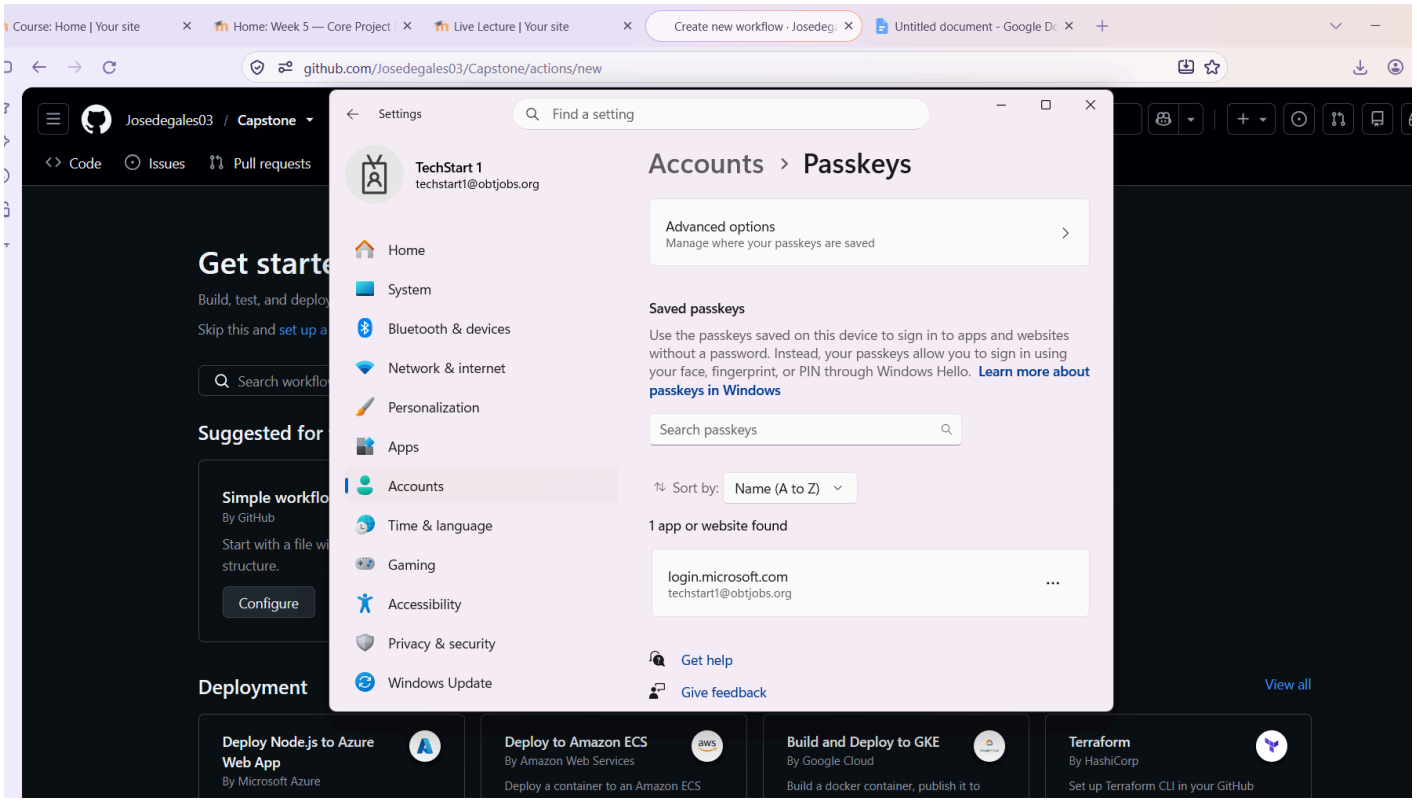

I went to Settings - Accessibility and adjusted the font size.

I opened Settings, went to System, and applied four energy recommendations in the Power menu.

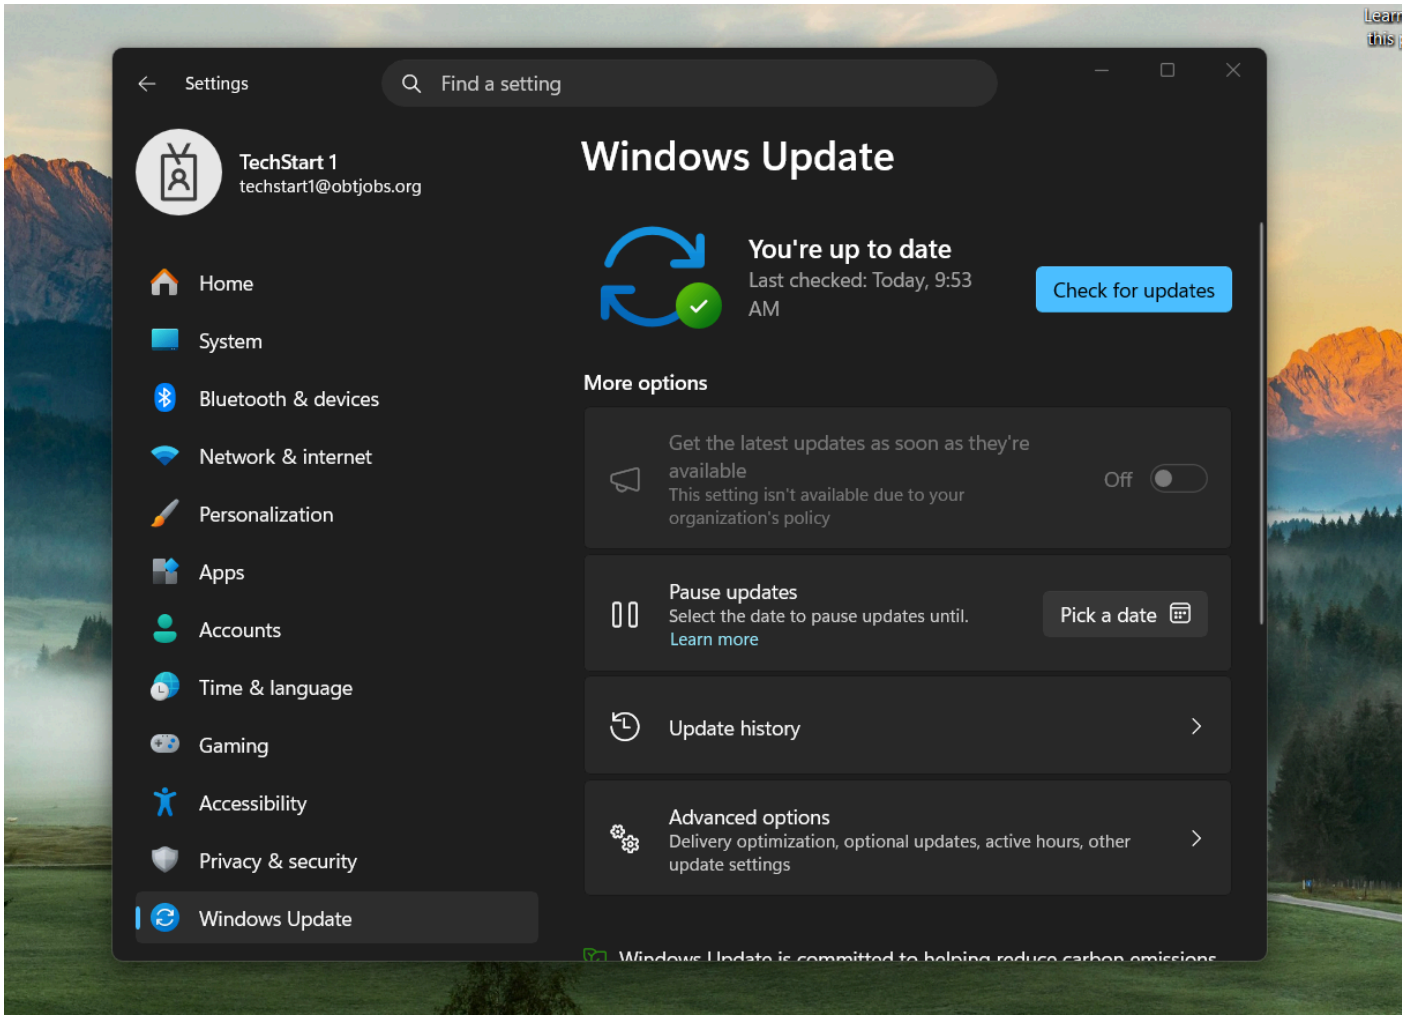

I opened System Settings and navigated to Users / User Accounts.

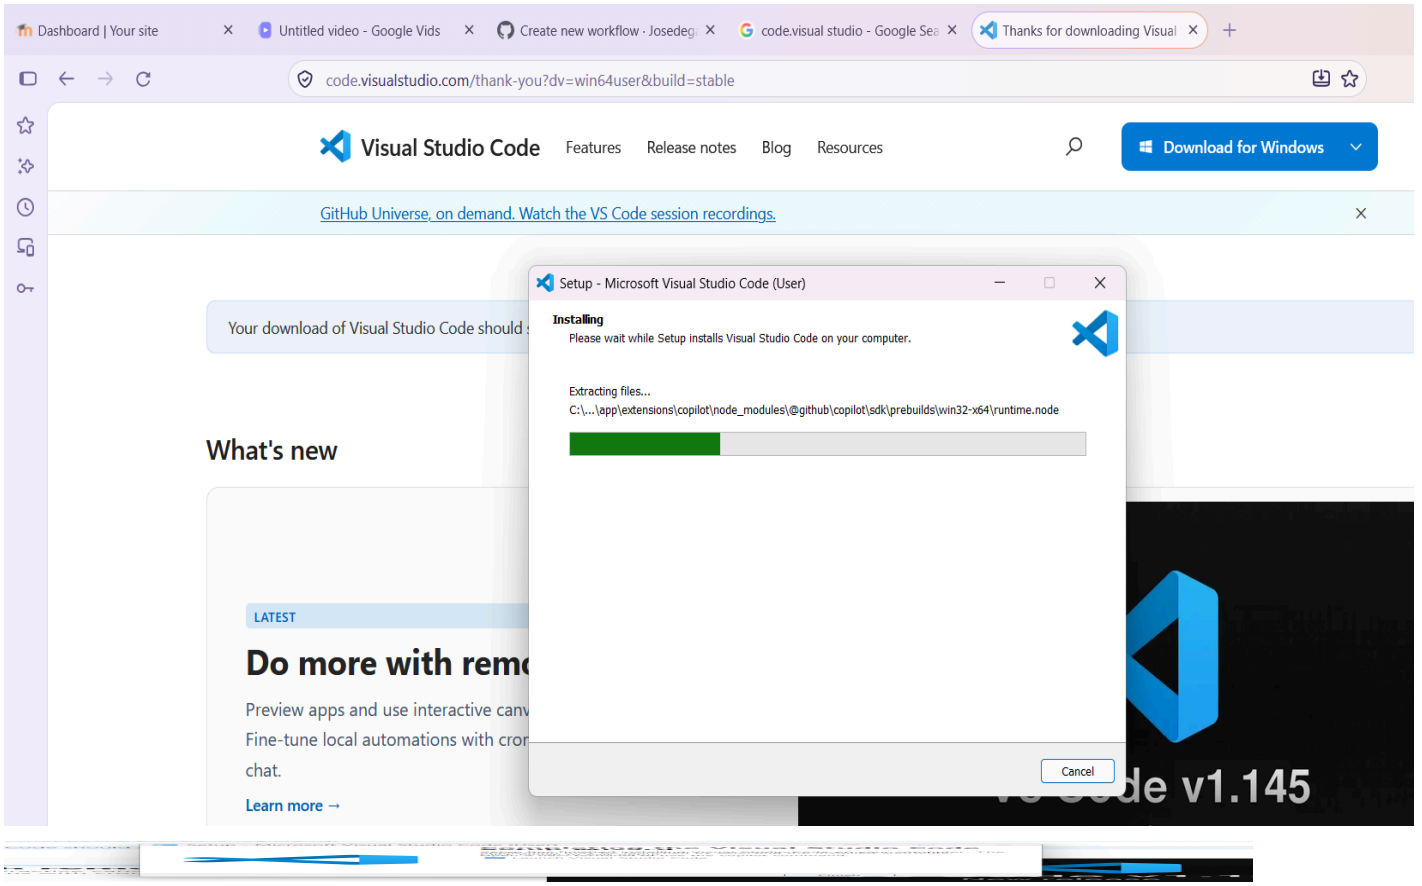

Went to the passkeys/passwords settings.

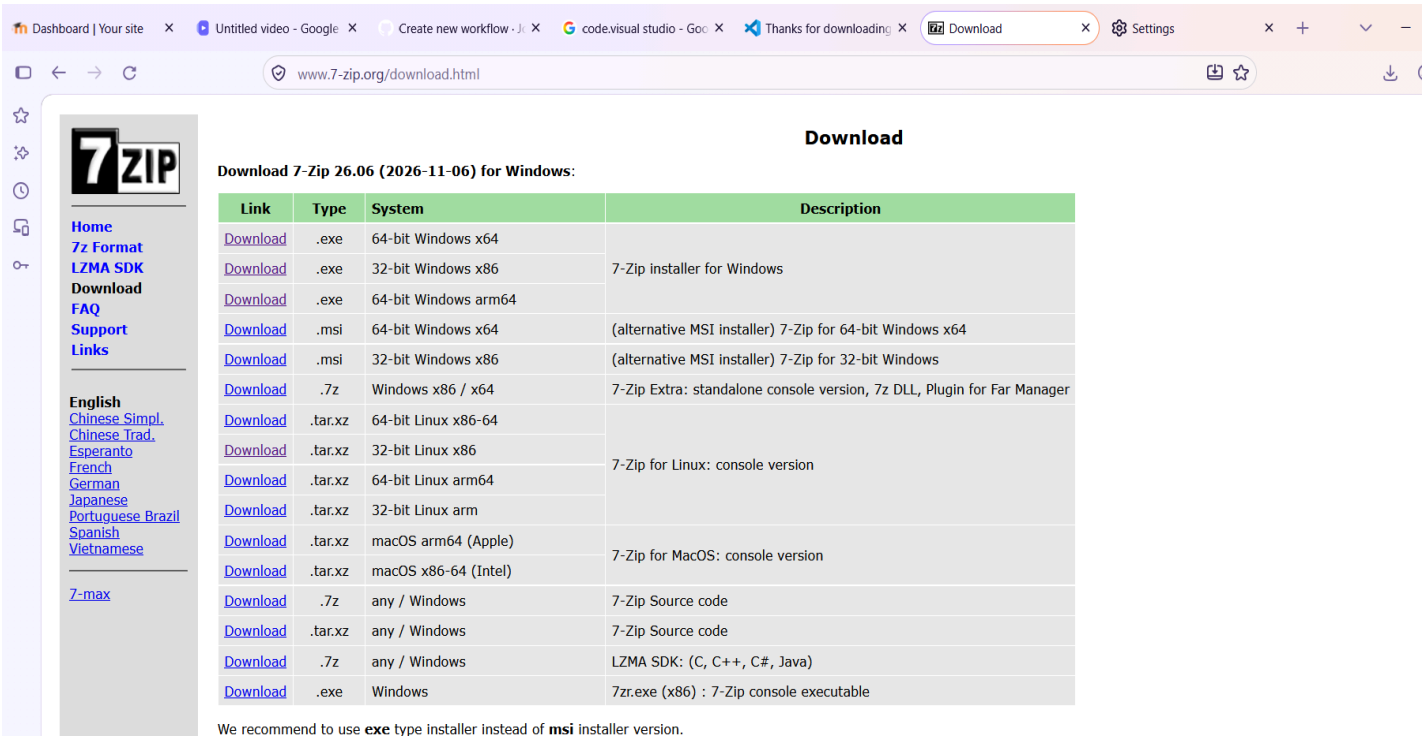

.

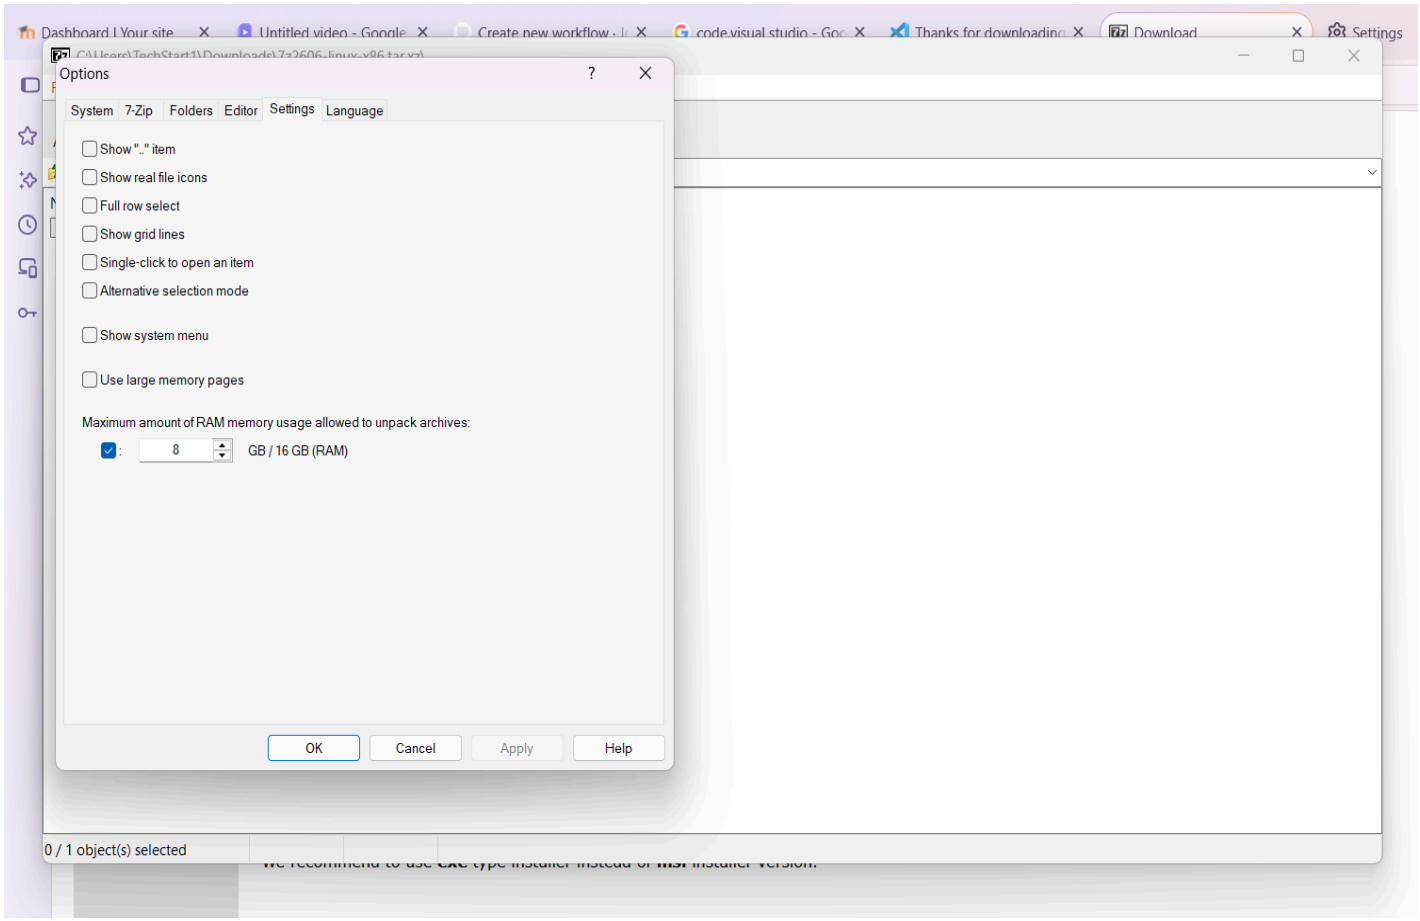

I updated Windows, and now my laptop is all up to date.

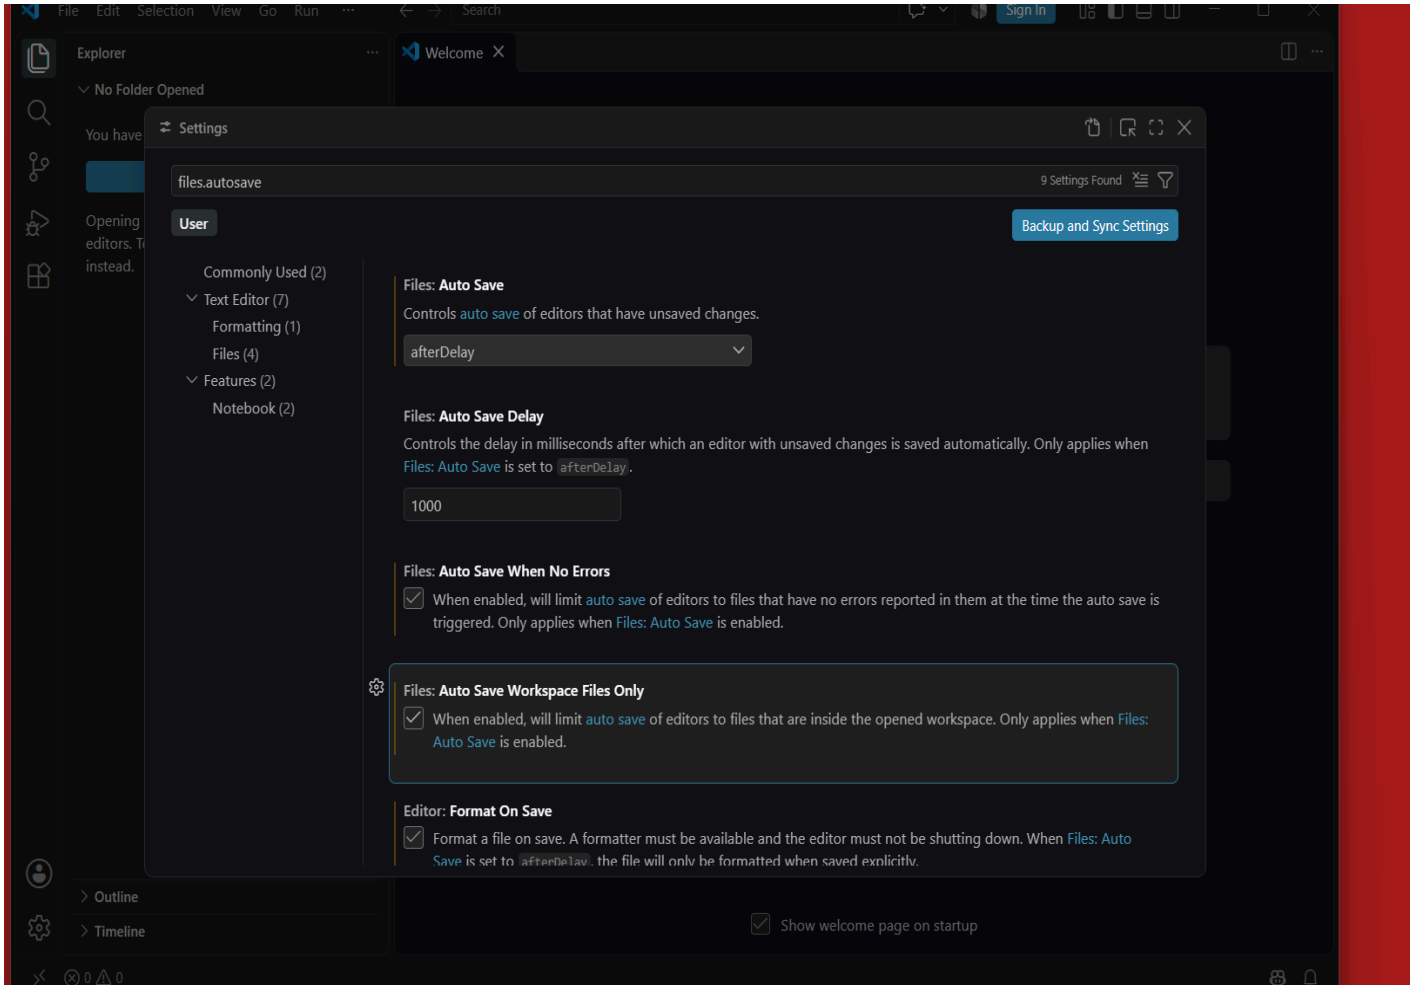

Right here, Visual Studio is getting ready to install so we can start using it.

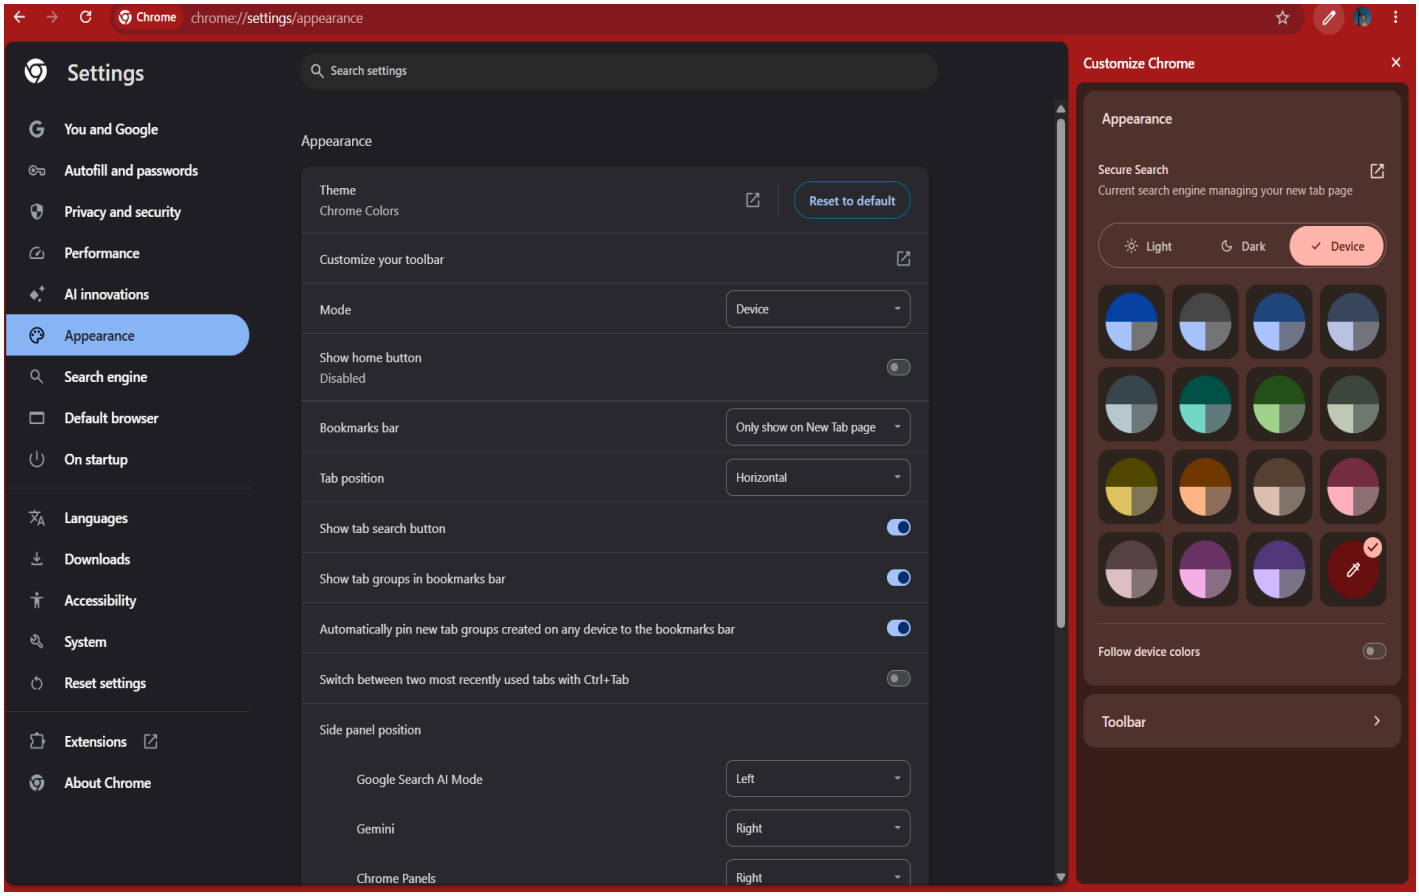

Right here, we have 7-Zip, and I've downloaded the Linux version.

I opened the settings in 7-Zip, went to Options, and changed the memory allocation to 8 GB out of 16 GB. (RAM)

In Visual Studio, I opened Settings, went to Auto Save, set it to afterDelay, and checked the box as shown on the screen.

In Google Chrome, I opened Settings and changed the background color to bright red
